

## Pattern Recognition

*Creating Complex Patterns in Adobe Illustrator*

The instructions for this project are easy. After following along with the in-class demo, create a pattern using Adobe Illustrator. Print it out and mount to black illustration board with a 1" border (follow all guidelines for turning in final projects). There is no size requirement.

You will be graded upon the following factors:

- 1) Difficulty of pattern design
- 2) Seamlessness of pattern
- 3) Quality of print out
- 4) Quality of overall presentation

These projects are due Monday, October 26th. We will not have a critique. Instead we will take a silent vote for Best Pattern. The winner will receive 2 whole percentage points added on to their FINAL grade. Below are some relatively simple pattern tiles:
